Airgas Healthcare
an Air Liquide company

Loss of gas supply can be far more than an inconvenience, especially for incubators and analytical systems where out-of-spec environmental conditions can disrupt or delay research and production.

This is especially true for CO2 gas feeds to incubators. Unlike nitrogen or oxygen cylinders where there is a direct link between pressure drop and contents consumption, CO2 pressure remains nearly constant until the cylinder is almost fully depleted and then sharply drops to empty.

As a result, manual gauge checks are time consuming, cumbersome and often inconclusive.

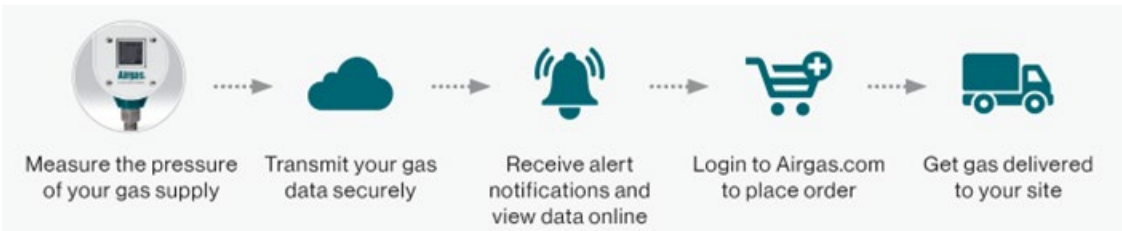

Why It Matters?

- Users must be aware if their cylinders are nearly full, nearly empty or somewhere in between.
- Checking pressure gauges is often only effective at confirming you are out of gas—which is too late to protect sensitive testing or production.

EZ-GAZ™ is the solution to minimizing run out risks and monitoring challenges.

Airgas developed a set of gas supply system solutions backed by EZ-GAZ digital monitoring and alerts service including:

- Primary gas supply via high-pressure gas cylinders or cryogenic liquid cylinders
- Automatic changeover manifolds to maintain uninterrupted gas supply
- Back-up panels for added supply assurance— especially helpful for cryogenic liquid cylinder supplies where it is hard to tell how much gas you have in the secondary gas supply.

Benefits for BIO Members:

- Reduced risks associated with gas run outs and associated impact to research or production
- Optimized gas supply and backup systems
- Remote gas visibility and alerts from anyplace anytime.

**Get Started with the
BIO-Airgas Program**

- Time and cost savings
- Gas use tracking and reporting
