# What Insurers Won't Tell You About Drug Costs

#### DRUGS ARE NOT DRIVING PREMIUM INCREASES

According to insurance company rate justifications, for every \$1 dollar increase in premiums for medical spending, just 17.5 cents are attributed to prescription drugs.

Private insurance companies spend almost as much on administrative costs as they do on prescription drugs.

\$127 B

Prescription Drugs

\$122 B

Insurance Admin. Costs

## CONSUMERS ARE PAYING MORE FOR LESS COVERAGE

Insurers make you pay 5x more in cost-sharing for prescription drugs than they do for hospital care.

T5%
Prescription
Drugs

5x

3% Hospital Care Top Three Increases in Cost-Sharing 2015-16

14% Copayments for nonpreferred drugs

10% Out-of-pocket limits

General annual deductibles

#### INSURERS DISCRIMINATE BY CHARGING EXCESSIVE COST-SHARING

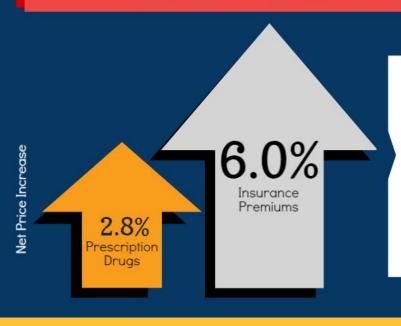

In 2015, the New York
Attorney General
investigated insurers that
refused to cover drugs to
cure Hepatitis C until the
patient was in late-stage
liver deterioration.

Some insurers require out-of-pocket costs of up to

50%

for drugs that cure or treat complex diseases such as Cancer, HIV, & Hepatitis C. A 2015 Harvard study found 12 ACA plans that discriminated against HIV patients, causing them to pay \$3,000 more annually than patients on other plans.

### HIGHER PREMIUMS MEAN HIGHER PROFITS

The net price increase of prescription drugs in 2015 was just 2.8%, which is on par with inflation. Meanwhile, insurance premiums increased by 6.0%.

At the industry level, insurers rank 17th in profitability while biopharmaceutical companies rank 45th.

Insurance companies blame drug prices as the cause of higher insurance premiums.

But they're not telling you the truth.
